st.components.v1.iframe

Streamlit Version ▼

Load a remote URL in an iframe.

To use this function, import it from the `streamlit.components.v1` module.

Warning

Using `st.components.v1.iframe` directly (instead of importing its module) is deprecated and will be disallowed in a later version.

`st.components.v1.iframe(src, width=None, height=None, scrolling=False)`

Parameters

`src` (str) The URL of the page to embed.

`width` (int) The width of the iframe in CSS pixels. By default, this is the app's default element width.

`height` (int) The height of the frame in CSS pixels. By default, this is 150.

`scrolling` (bool) Whether to allow scrolling in the iframe. If this `False` (default), Streamlit crops any content larger than the iframe and does not show a scrollbar. If this is `True`, Streamlit shows a scrollbar when the content is larger than the iframe.

Example

```
import streamlit.components.v1 as components

components.iframe("https://example.com", height=500)
```
