Command-line interface

When you install Streamlit, a command-line (CLI) tool gets installed as well. The purpose of this tool is to run Streamlit apps, change Streamlit configuration options, and help you diagnose and fix issues.

To see all of the supported commands:

```
streamlit --help
```

Run Streamlit apps

```
streamlit run your_script.py [-- script args]
```

Runs your app. At any time you can stop the server with **Ctrl+c**.

push_pin

Note

When passing your script some custom arguments, **they must be passed after two dashes**. Otherwise the arguments get interpreted as arguments to Streamlit itself.

To see the Streamlit 'Hello, World!' example app, run `streamlit hello`.

View Streamlit version

To see what version of Streamlit is installed, just type:

```
streamlit version
```

View documentation

```
streamlit docs
```

Opens the Streamlit documentation (i.e. this website) in a web browser.

Clear cache

```
streamlit cache clear
```

Clears persisted files from the on-disk [Streamlit cache](#), if present.

View all configuration options

As described in [Configuration](#), Streamlit has several configuration options. To view them all, including their current values, just type:

```
streamlit config show
<Previous: App testingNext: streamlit run>
forum
```

Still have questions?

Our [forums](#) are full of helpful information and Streamlit experts.
