## Utilities and user info

There are a handful of methods that allow you to create placeholders in your app, provide help using doc strings, get and modify configuration options and query parameters.

#### **Context**

st.context provides a read-only interface to access cookies and headers.

st.context.cookies st.context.headers

## Get help

Display object's doc string, nicely formatted.

st.help(st.write) st.help(pd.DataFrame)

## **Render HTML**

Renders HTML strings to your app.

st.html("Foo bar.")

## **User info**

st.experimental\_user returns information about the logged-in user of private apps on Streamlit Community Cloud.
