# st.set\_option

Streamlit Version Version 1.41.0

Set a configuration option.

Currently, only client configuration options can be set within the script itself:

~

- client.showErrorDetails
- client.showSidebarNavigation
- client.toolbarMode

Calling st.set\_option with any other option will raise a StreamlitAPIException. When changing a configuration option in a running app, you may need to trigger a rerun after changing the option to see the effects.

Run streamlit config show in a terminal to see all available options.

## **Function signature**[source]

#### st.set\_option(key, value)

#### **Parameters**

key (str) The config option key of the form "section.optionName". To see all available options, run streamlit config show in a terminal.

value (null)

The new value to assign to this config option.

## Example

```
import streamlit as st

st.set_option("client.showErrorDetails", True)

←Previous: st.get optionNext: st.set page config→
forum
```
