# st.divider

Streamlit Version Version 1.41.0

Display a horizontal rule.

Note

You can achieve the same effect with st.write("---") or even just "---" in your script (via magic).

**Function signature**[source]

st.divider()

### Example

```
import streamlit as st
st.divider()
```

Here's what it looks like in action when you have multiple elements in the app:

```
import streamlit as st st.write("This is some text.") st.slider("This is a slider", 0, 100, (25, 75))
st.divider() # > Draws a horizontal rule st.write("This text is between the horizontal rules.")
st.divider() # > Another horizontal rule
```
